

## sites & sights to see

[A \(slightly irreverent\) view of the hyperlinked organization](#)  
[The greatest chefs of the world beckon you online](#)  
[Live to you from the FAA's Air Traffic Control Center](#)  
[Enjoy full panoramas of famous European cities](#)  
[Roam around the Sustainable Energy & Economy network](#)  
[Stars. Shows. Show times. Playing on Broadway now](#)  
[All the right moves from the sport pros](#)  
[Seinfeld quotes . . . enough said](#)  
[Start to browse at a different site every time](#)

## events to highlight

Again, we have a lot to tell you. Here are the highlights:

- \* We delivered on time, and budget the Theodore Roosevelt Centennial Gubernatorial CD-ROM to the T. Roosevelt Association, the State of New York, and the National Park Service.
- \* We've arranged for the distribution of our authors' ebooks to all public, academic, and school libraries through GalaxyLibrary.com.
- \* A record number of publishing, and web projects are under way for new, and established authors, as well as business clients.

## the Aussies are coming . . .

"Released on parole, I went straight for three years, thanks to the help of the Prisoners Aid Association (now known as OARS), where I was given work. But I still carried a huge mental load. My conscience seemed like a raw chunk, as if someone was slicing through my nervous system with a razor blade."

So tell the following two bestsellers from Australia the story of Barry Goode: *Too Tough for Tears*, and *Prisoner of Hope*. Having signed a multi-year exclusive contract with him, we will start introducing, promoting, and distributing these ebooks through the ebook sections of Amazon.com, Barnes & Noble, and other major outlets.

## editorial flash

What's the latest buzz on the Web? B2B? B2C? Click and mortar? (At least, this last one is semi comprehensible).

No, the "new, new" thing is what in reality the original Internet was all about: peer-to-peer, or P2P for the "initiated". In 1964, the RAND Corp. released a proposal, authored by Paul Baran, that called for a new, totally distributed and thus indestructible computer communications network for the military. Built from the ground up, the network would be totally decentralized - i.e. peer-to-peer, and designed to work even if pieces of it died. All nodes would be equal and data would flow through them in random, not predetermined routes.

Why is this of more than academic interest to you? If you have used or heard about AOL's ICQ instant messaging, Napster or Gnutella, they all have one thing in common: they allow you to have two way communications. You can be a broadcaster and listener, seller and buyer, author and reader at the same time, through peer to peer sessions, which are not controlled centrally. True freedom at last!

So now we can have this unfettered access to each others' computers; chat or download whatever you like for free, if you want to. Can you get paid for your work under such circumstances? All of it? Part of it? Who will pay you, and how?

Let me know where you stand, by sending your free bits (and bytes too) to the: [editor@newmediapublishing.com](mailto:editor@newmediapublishing.com).

## to pull a Broadway allnighter
